AI Overview

Based on April 2026 API pricing, the Claude code models, ordered from most expensive to least expensive, are generally structured into three tiers: Opus (flagship), Sonnet (balanced), and Haiku (fast/budget). Claude Platform +1

Claude Code Models in Order of Expense (Highest to Lowest)

1. **Claude Opus 4.7/4.6/4.5** (Most Expensive/Most Capable)
   - **Cost:** ~$5.00 / million input tokens, $25.00 / million output tokens.
   - **Best for:** Complex architectural decisions, large codebase analysis, and advanced agentic tasks.
2. **Claude Sonnet 4.6** (Balanced)
   - **Cost:** ~$3.00 / million input tokens, $15.00 / million output tokens.
   - **Best for:** Daily development, providing "Opus-level" coding intelligence at a lower price point.
3. **Claude Haiku 4.5** (Budget/Fastest)
   - **Cost:** ~$1.00 / million input tokens, $5.00 / million output tokens.
   - **Best for:** Routine tasks, file reads, quick edits, and high-volume operations. Claude Platform +2

Key Pricing & Usage Notes

- **Batch Pricing:** Using the Batch API offers a 50% discount on these rates for non-urgent tasks.
- **Context Window:** Claude Opus 4.7/4.6 and Sonnet 4.6 support 1M context tokens.
- **Performance vs Cost:** While Opus 4.7 is the most capable model, developers frequently prefer Sonnet 4.6 for daily coding tasks because of its better speed-to-cost ratio.
